The Uneven Application of \textit{Twombly} in Patent Cases: An Argument for Leveling the Playing Field

R. David Donoghue

Abstract

The Supreme Court's recent \textit{Twombly} decision has tightened pleading standards by retiring \textit{Conley v. Gibson}'s "no set of facts" language. While \textit{Twombly} has been applied beyond antitrust law, its impact on patent pleadings is not yet settled. Currently, a troubling dichotomy has emerged: lower courts are holding defendants to a heightened pleading standard for affirmative defenses and counterclaims, while allowing plaintiffs to continue the pre-\textit{Twombly} "bare-bones" pleadings practice. This dichotomy is inconsistent with the \textit{Twombly} Court's goal of controlling the ballooning size of and costs of complex civil litigation. Holding patent plaintiffs to a heightened pleading standard would be at most a negligible added burden in light of Rule 11's pre-filing investigation requirement, and level the playing field by allowing defendants to better formulate specific defense theories.

Copyright © 2008 The John Marshall Law School

For the past several decades, Federal Rule of Civil Procedure 8(a)(2) was understood to require only bare-bones pleading, or "a short and plain statement of the claim[ ]". Litigants in patent cases became masters at the art of no-frills pleading. Plaintiffs asserting patent infringement routinely filed complaints that simply laid out jurisdiction and venue, identified a patent, claimed a sufficient ownership interest in the patent, and claimed that defendant infringed the patent. Some complaints identified specific products, but most complaints only listed examples with open-ended language. In response, defendants typically filed answers that consisted of plain statements of affirmative defenses and counterclaims, without any support or detail. Sometimes even inequitable conduct was pled without specificity.

---

3 See, e.g., Phonometrics, Inc. v. Hospitality Franchise Sys., Inc., 203 F.3d 790, 792-94 (Fed. Cir. 2000) (reversing district court's dismissal which required the plaintiff patentee to "express allegations of infringement of each claim element").
4 See, e.g., Cordance Corp. v. Amazon.com, Inc., 521 F. Supp. 2d 340, 344-45 (D. Del. 2007) (rejecting argument that defendant's counterclaim was deficient for failing to specifically name the plaintiff's accused product); Yates Foul U.S.A., Inc. v. Iljin Group, No. 05-3902 (RMB), 2007 WL 2746949, at *1-2 (D.N.J. Sept. 18, 2007) (denying accused infringer's motion to dismiss a patent infringement claim on the basis that the patentee failed to identify allegedly infringing products).
Thus, for years, both plaintiffs and defendants practiced minimalist pleading in relatively equal measure. As a result, Rule 12(b)(6) motions to dismiss patent claims were virtually nonexistent. But that practice is changing.

The Supreme Court readjusted the playing field when addressing pleading standards in a complex antitrust case. In *Bell Atlantic Corp. v. Twombly*, the Court held:

While a complaint attacked by a Rule 12(b)(6) motion to dismiss does not need detailed factual allegations, a plaintiff’s obligation to provide the “grounds” of his “entitlement to relief” requires more than labels and conclusions, and a formulaic recitation of the elements of a cause of action will not do. Factual allegations must be enough to raise a right to relief above the speculative level, on the assumption that all the allegations in the complaint are true (even if doubtful in fact).

In the eighteen months since *Twombly* came down, district and appellate courts have applied *Twombly* beyond antitrust law to almost every area of substantive law.

The courts are split, however, on the precise impact that *Twombly* has on pleadings in patent cases. An unsettling dichotomy has emerged: lower courts are holding defendants to a heightened pleading standard for affirmative defenses and counterclaims, while allowing plaintiffs to continue the pre-*Twombly* “bare-bones” pleadings practice. Whereas the playing field between plaintiffs and defendants was fairly and predictably level before *Twombly*, the uneven application of *Twombly*...
by lower courts has tilted that playing field decidedly in favor of plaintiffs. The potential implications for patent litigants and practitioners are significant.

This cannot be right. It certainly is not a good outcome for the legal process or for the interests of justice. Pleading standards are an important and powerful tool for streamlining litigation and litigation costs, as the Supreme Court recognized in *Twombly*.

But changing the standards for defendants alone will not significantly reduce litigation size or cost because the scope of the plaintiff’s case is the chief driver of the size of litigation. Increasing pleading standards for one side of a litigation while maintaining it for the other side is neither equitable nor sensible.

Patent pleadings should be held to the heightened *Twombly* standards, as some courts began doing even before *Twombly*, but the standards must be consistent for both claims and defenses. That is the only way to meet the *Twombly* court’s goal of controlling the ballooning size and costs of complex civil litigation.

Holding plaintiffs to a heightened pleading standard will not substantially increase a patent plaintiff’s pre-filing burden. After all, Rule 11 of the Federal Rules of Civil Procedure already requires plaintiffs to perform a pre-filing investigation that includes a comparison of the accused products to the patent’s claims. A heightened pleading requirement would require only a marginal additional burden on plaintiffs: a plaintiff would be required to identify the particular claims that they accuse defendant of infringing. This negligible added burden, which some courts already require, would both streamline cases and enable defendants to answer complaints with more detailed factual defenses and counterclaims.

Without a precise identification of asserted claims, courts can hardly expect defendants to provide any meaningful detail as to their noninfringement and invalidity theories.
invalidity defenses, without any idea as to which claims are at issue. A defendant cannot effectively argue that a claim is invalid when he does not know which claims are asserted. The problem is exacerbated given the short timetable with which defendants are required to answer—under the rules, a defendant must file an answer within twenty days of being served with the complaint, sixty if service is waived.

Part I of this article surveys the pre-*Twombly* notice pleading standards as applied to patent cases. Part II analyzes the *Twombly* decision and the Court’s reasoning. Part III looks at significant Federal Circuit and district court decisions that have applied *Twombly* to raise pleading standards for affirmative defenses while maintaining the status quo for complaints. Part IV argues that the courts should apply *Twombly* in such a way as to restore the balance between plaintiffs’ and defendants’ pleading burdens by: (1) adopting, as many district courts already have, local rules requiring plaintiffs to disclose their infringement positions early in the case; and (2) requiring a more stringent pleading for patent claims and affirmative defenses.

## I. PRE-*TWOMBLY* PLEADING HISTORY

Modern pleading standards grew out of the British system. In the original American system, as in the British system, common law pleading was a highly technical process that involved multiple rounds of pleadings designed to whittle down a case to a few issues of law or fact. The system was designed to narrow the issues and reduce costs, but in practice, it became an “excruciatingly slow, expensive, and unworkable” system. Not only was this system slow, but it also tended to reward the more competent technical pleader, regardless of the merits of the underlying action.

In the mid-nineteenth century, state legislatures began replacing common law pleading with code pleading. Code pleading, such as New York’s “Field Code,” replaced the technical pleading requirement with a requirement to plead operative facts. Legal conclusions and evidential facts were not to be pled. As a practical

---

24 Cf. Korostash, supra note 13, at 7 (suggesting that providing only enough detail in a complaint to allow the defendant's answer to meet the notice pleading required to survive a motion to dismiss without disclosing which claims are at issue will not allow the defendant to provide any meaningful detail as to his noninfringement and invalidity defense).

33 Id.
The Uneven Application of Twombly in Patent Cases

matter, however, the distinction between operative facts, evidential facts, and legal conclusions often was difficult to make. As a result, code pleading, just like its common law predecessor, became immensely technical and expensive. And just as with common law pleading, code pleading tended to reward the best technical pleader regardless of the merits.

In the 1930s, Federal Rule of Civil Procedure 8(a) was drafted as a response to the problems of code pleadings. It was intended to restore the parties’ and the court’s focus to the merits of the case. Rule 8(a) deemphasized technical requirements in favor of simplicity. In place of the operative fact requirements, Rule 8 required straightforward notice pleading: “a short and plain statement of the claim showing that the pleader is entitled to relief.” Rule 8(a) was designed to facilitate early resolution of disputes using the discovery system and ultimately trial, as opposed to forcing litigants out of the system through successive pleadings. The drafters believed—in hindsight, naively—that it would be faster, less expensive, and more efficient for parties to resolve disputes using discovery rather than through several rounds of technical pleading.

The Supreme Court solidified the Rule 8 pleading standards in Conley v. Gibson. Until Twombly, Conley served as the cornerstone of pleading requirements and Rule 12(b)(6) motions to dismiss. In Conley, the Court held that a motion to dismiss must be denied unless “no set of facts” would entitle plaintiff to relief:

In appraising the sufficiency of the complaint we follow, of course, the accepted rule that a complaint should not be dismissed for failure to state a claim unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief.

In the patent context, Conley and Rule 8(a) set a low bar for a plaintiff patent holder. Under the Conley and Rule 8(a) framework, a patent holder need only:

1. identify a defendant;
2. plead ownership of a patent or a sufficient interest in the patent;
3. plead infringement of the patent by defendant; and
4. perhaps identify some of the allegedly infringing products or services.
But as every practitioner knows, a patent case does not take shape based on the complaint. The bare assertion of a patent, with nothing more, sheds little light on what the case is about. The question of patent infringement is determined by comparing the accused products to specific patent claims. Often, neither party has any insight as to the true scope of the case until discovery is well under way. This is a problem because discovery quickly can become enormously and prohibitively expensive in a patent case, particularly where one party is a large corporation with a substantial amount of electronically stored information. And of course once a party is forced to expend significant resources on discovery, settlement becomes much more expensive and unlikely.

The modern reality of increasingly discovery-intensive and expensive civil litigation provides the backdrop for the Supreme Court's \textit{Twombly} decision. \textit{Twombly} naturally focused on the complexity and expense of antitrust litigation. But patent cases are equally complex and expensive. Corporate defendants routinely spend hundreds of thousands of dollars collecting and analyzing documents just to respond to document requests in the beginning of a case. It is the rare patent case that settles or is otherwise resolved before the corporate defendant must go through this exercise.

\section*{II. \textit{TWOMBLY}}

In \textit{Twombly}, the Supreme Court considered the Rule 8(a)(2) requirement that a pleading contain “a short and plain statement of the claim showing that the pleader is entitled to relief” in antitrust action. The Court held that Federal Rule 8 is intended to “give the defendant fair notice of what the...claim is and the grounds upon which it rests.” The Court then found:

\begin{itemize}
  \item See FED. R. CIV. P. app. form 18 (illustrating a patent infringement complaint).
  \item See \textit{Cybor Corp. v. Fas Techs.}, Inc., 138 F.3d 1448, 1454 (Fed. Cir. 1998).
  \item See MacPherson, \textit{supra} note 15, at 277–81.
  \item Id.
  \item \textit{Twombly}, 127 S. Ct. at 1966–67.
  \item Id. at 1967 (noting that one cannot “forget that proceeding to antitrust discovery can be expensive”).
  \item MacPherson, \textit{supra} note 15, at 277–79.
  \item Id. (omission in original) (quoting Conley v. Gibson, 355 U.S. 41, 47 (1957)).
\end{itemize}
While a complaint attacked by a Rule 12(b)(6) motion to dismiss does not need detailed factual allegations, a plaintiff's obligation to provide the "grounds" of his "entitlement to relief" requires more than labels and conclusions, and a formulaic recitation of the elements of a cause of action will not do. Factual allegations must be enough to raise a right to relief above the speculative level, on the assumption that all the allegations in the complaint are true (even if doubtful in fact).

While, for most types of cases, the Federal Rules eliminated the cumbersome requirement that a claimant "set out in detail the facts upon which he bases his claim," Rule 8(a)(2) still requires a "showing," rather than a blanket assertion, of entitlement to relief. Without some factual allegation in the complaint, it is hard to see how a claimant could satisfy the requirement of providing not only "fair notice" of the nature of the claim, but also "grounds" on which the claim rests.

The Court further explained that it was "retiring" the well-worn Conley proclamation that a claim would not be dismissed unless the plaintiff could "prove no set of facts" supporting his claims. The Twombly Court specifically rejected this language:

The phrase is best forgotten as an incomplete, negative gloss on an accepted pleading standard: once a claim has been stated adequately, it may be supported by showing any set of facts consistent with the allegations in the complaint.

In place of the "no set of facts" standard, the Court held that Rule 8 requires claims stating a "plausible entitlement to relief." Claims that do not make a "plausible" claim to relief should "be exposed at the point of minimum expenditure of time and money by the parties and the court."

Twombly involved a section 1 Sherman Act complaint and the Court remained silent as to whether the new standard applied to other areas of law beyond antitrust. But Twombly has grabbed the attention of the federal bench and bar: district and appellate courts have begun to apply Twombly across just about all areas of law, and a variety of commentators are beginning to write about it.

Courts have applied *Twombly* to actions as diverse as Title VII, property damages, section 1983 actions, immigration law, common law torts, ERISA, and misrepresentations to the United States Patent and Trademark Office during trademark prosecution.⁶⁷

### III. *TWOMBLY APPLIED TO PATENT CASES*

As of the time of this writing, the Federal Circuit has addressed this issue only once.⁶⁸ In *McZeal v. Sprint Nextel Corp.*,⁶⁹ the Federal Circuit held that *Twombly* did not alter the Rule 8 pleading standards for patent infringement claims brought by a pro se plaintiff.⁷⁰ Pro se plaintiff McZeal accused a Sprint Nextel phone of infringing his patent.⁷¹ At the district court's prompting, Sprint Nextel orally moved to dismiss McZeal's complaint for failure to state a claim under Rule 12(b)(6).⁷² The district court granted the motion and refused McZeal's request to file an amended complaint.⁷³ The district court explained that the complaint was irreparable because there were no set of facts to support it.⁷⁴

Before ruling on the sufficiency of McZeal's complaint, the Federal Circuit analyzed the Supreme Court decisions that allow courts to provide pro se litigants leeway in procedural matters.⁷⁵ The Federal Circuit then held that pro se plaintiff McZeal was entitled to such leniency and that he met the Rule 8 pleading standards, even under *Twombly*, because he pled ownership of a patent and he pled that a specific Sprint Nextel telephone infringed that patent.⁷⁶ The Court reasoned that McZeal did not need to plead each element of each claim of the patents.⁷⁷ Despite the *McZeal* decision, it is a relatively small step, and a reasonable one based upon the *Twombly* Court's reasoning, to see that the post-*Twombly* pleading standard should

⁷⁶ *Id.* at 1357.

⁷⁷ *Id.*
require a plaintiff to plead infringement of specific patent claims by specific accused products.

Without strong Federal Circuit guidance, district courts have been scattered in their application of *Twombly* to patent cases. Generally, courts are adopting the Federal Circuit’s *McZeal* reasoning, often citing Federal Rule of Civil Procedure Form 18, and holding that a plaintiff is only required to plead sufficient interest in the patent, the defendant’s identity, and that a particular product or service, or category of products or services, infringes the patent.

At least one court has limited *Twombly*’s reach to antitrust cases. In *CBT Flint Partners, LLC v. Goodmail Systems, Inc.*, the district court reasoned that *Twombly* did not require heightened pleading of patent claims. The “new *Twombly* standard” was a solution to the high discovery costs in the complex antitrust litigation arena, not a broad rewrite of Federal Rule 8:

The Court’s “new standard” was merely a specific way to articulate a solution to what it perceived to be a specific pleading problem, in a specific area of law that inflicted a high cost upon antitrust defendants. It was not a broad based new license for federal courts to ramp up pleading requirements.

The *CBT Flint* court reasoned that the problem of expansive, expensive patent discovery was resolved by the United States District Court for the Northern District of Georgia’s local patent rules requiring early disclosure of infringement contentions. The Northern District of Georgia requires plaintiffs to serve detailed infringement contentions, including claim charts, within thirty days of filing a joint Federal Rule of Civil Procedure 26(f) report, a report that is generally filed within months of a complaint being filed, and sometimes before the complaint is answered. Similarly, the Northern District of Georgia requires defendants to serve noninfringement and invalidity contentions within thirty days after receiving plaintiff’s infringement contentions.

84 Id. at 1379.
87 Id. at 4.2, 4.3, 4.4(b).
But a disturbing trend is emerging. Some courts are applying *Twombly* to dismiss the once-standard bare recitations of affirmative defenses, and invalidity and noninfringement counterclaims.\(^8\) All of this suggests a trend of district courts applying *Twombly* to raise the pleading standards for defendants, but not plaintiffs. Plaintiffs continue to be required to meet the old notice pleadings standards—identifying a patent, ownership of sufficient rights in the patent and defendant’s accused products to some level of specificity.\(^8\) But defendants are held to a higher standard, somewhere between the old standard and Rule 9 heightened pleading, for affirmative defenses and counterclaims.\(^9\) Presumably this is *Twombly’s* “plausible” standard.\(^9\)

In *Aspex Eyewear, Inc. v. Contour Optik, Inc.*,\(^9\) for example, the district court held that it was enough for plaintiff to identify defendant’s allegedly infringing product, and that plaintiff need not identify the specific asserted claims of the patents in suit.\(^9\) But the district court struck defendant’s affirmative defenses, including an invalidity defense, because those defenses asserted no facts.\(^9\) This imbalance leads to a nonsensical result—the defendant must articulate detailed, fact-based defenses asserting that the patent claims are invalid, without even knowing which claims he must invalidate. To meet this burden, a conscientious defendant would be forced to identify prior art against all claims in the asserted patents, all within twenty days after receiving the complaint (or sixty days if the defendant waives service).\(^9\) Not only would this lead to a massive waste of resources, it would give plaintiff an unfair advantage: plaintiff could pick and choose which particular claims to assert based on the strengths and weaknesses of defendant’s prior art case against each claim. This cannot be what the Supreme Court had in mind when it sought to streamline litigation and reign in costs.\(^9\)

Plaintiffs should be required at least to identify at the outset of the case the claims that they intend to assert and the products allegedly infringing each asserted claim. Plaintiffs are already required to engage in sufficient pre-filing investigations under Rule 11.\(^9\) And plaintiffs control the timing of the suit that they file (with the

The Uneven Application of Twombly in Patent Cases

exception, of course, of declaratory judgment actions). So at least theoretically, plaintiffs should be able to take the time to think through their strategy before filing suit. After all, the clock does not start ticking until the plaintiff decides to start it by filing suit. Plaintiffs can send potential defendants a notice letter and then have as long as six years to perform their Rule 11 pre-filing investigation, while defendants are given either twenty days (with normal service) or sixty days (if they waive service) to answer a complaint.

IV. EQUALIZING THE EFFECTS OF TWOMBLY

The Supreme Court cannot have intended this inequitable result. Requiring defendants to plead defenses with greater detail than plaintiffs' claims is counter to Twombly's goals of streamlining complex litigation and reducing unnecessary costs. The better course is to apply the Twombly "plausible" standards equally to all parties. The costs will be relatively low, but the benefits will be substantial, including: (1) increased certainty about the merits, leading to a better ability to quantify outcomes and therefore negotiate settlements; (2) reduced litigation costs; and (3) a reduction in frivolous cases, or at least in the continued viability of frivolous cases. These benefits already can be seen in the district courts that have set their own heightened pleading standards or that have local rules requiring the parties to submit binding contentions early in the case. Cases in these courts tend to proceed in an orderly and predictable fashion, which not only reduces costs, but also leads to greater certainty and more meaningful settlement discussions.

The United States District Court for the Western District of Wisconsin, for example, requires plaintiffs to identify the specific claims that they assert are infringed and which products allegedly infringe them. This relatively minor additional pleading requirement significantly streamlines cases from their inception at a relatively low cost to plaintiffs because in order to comply with Rule 11 pre-filing obligations, plaintiffs should already have done the work of comparing the accused products to the patent claims.

100 Twombly, 127 S. Ct. at 1967 ("It is self-evident that the problem of discovery abuse cannot be solved by 'careful scrutiny of evidence at the summary judgment stage,' much less 'lucid instructions to juries': the threat of discovery expense will push cost-conscious defendants to settle even anemic cases before reaching those proceedings." (citation omitted)).
101 See, e.g., Cingular Wireless v. Freedom Wireless, Inc., No. CV06-1935 PHX JAT, 2007 WL 1876377, at *6 n.3 (D. Ariz. June 27, 2007) ("While any United States District Court, including this one, can afford all parties the timeliness, fairness, justice and competence required to resolve their patent disputes, the Court is persuaded that the Eastern District of Texas' special rules will most efficiently promote sound judicial administration.").
102 Taurus IP, LLC v. Ford Motor Co., 539 F. Supp. 2d 1122, 1127 (W.D. Wis. 2008) (explaining that even with "liberal" Rule 8 standards, "a plaintiff must provide notice of its claim so that the other side may prepare a defense" (quoting Ricoh Co. v. Asustek Computer, Inc., 481 F. Supp. 2d 954, 959 (W.D. Wis. 2007))).
103 Antonious v. Spalding & Evenflo Cos., 275 F.3d 1066, 1073–74 (Fed. Cir. 2002).
accused product is equivalent to the heightened pleading standards courts are adopting for defendants' affirmative defenses based upon Twombly.\textsuperscript{104}

Other courts have streamlined discovery using Local Patent Rules requiring early, detailed, and binding disclosures of infringement contentions, followed by corresponding noninfringement and invalidity contentions in short order.\textsuperscript{105}

The most well-known of the Local Patent Rules are those in the United States District Court for the Eastern District of Texas.\textsuperscript{106} The Eastern District of Texas requires plaintiffs to serve detailed infringement claim charts for each accused product and claim within ten days of the initial case conference.\textsuperscript{107} Defendants then must serve equivalent invalidity charts within forty-five days of receiving plaintiff's infringement contentions.\textsuperscript{108} These charts become final, unless they are updated based upon claim construction or with leave of court.\textsuperscript{109}

Local Rules such as these and similar ones in, for example, the Northern District of Georgia and the Northern District of California narrow cases even more effectively than Twombly's heightened pleading requirements.\textsuperscript{110} But the Twombly pleading requirements remain a significant and important part of streamlining patent cases, particularly in those districts that have not adopted local patent rules.

To truly address the concerns the Supreme Court raised in Twombly, it is critical that district courts, and eventually the Federal Circuit, normalize the effects of Twombly for plaintiffs and defendants by requiring plaintiffs to identify asserted claims and accused products in their complaints. As the law stands now, defendants will be in a twenty or sixty day sprint, depending upon whether they waived service, from receiving a complaint to answering.\textsuperscript{111} This time frame is unrealistic in the vast majority of patent cases. During those three to eight weeks, a defendant must digest the complaint, hire counsel, analyze the patent and the alleged infringement, and at least sketch out a "plausible" set of noninfringement and invalidity defenses, all while continuing to meet the obligations of defendant's business. That Herculean

\textsuperscript{104} See Aspex Eyewear, Inc. v. Clariti Eyewear, Inc., 531 F. Supp. 2d 622, 623 (S.D.N.Y. 2008) (holding that the plaintiff's complaint that identified a product, claimed ownership of two patents that the product infringed, and stated that the defendant did not have the right to manufacture or sell the product was a sufficient pleading for infringement while finding the defendant's similarly pled counterclaims and affirmative defenses such as obviousness and anticipation to be deficient under the Twombly standard).

\textsuperscript{107} Id. at 3-1.

\textsuperscript{108} Id. at 3-3.

\textsuperscript{109} Id. at 3-6, 3-7.

The Uneven Application of *Twombl*y in Patent Cases

burden is laughable when compared to plaintiff's freedom to leisurely explore its potential infringement claims, constrained only by the six year statute of limitations. That hardly seems equitable.

Additionally, disparate standards will significantly burden the district courts—district courts will face a marked increase in motions to dismiss counterclaims and motions to strike affirmative defenses. Until accused infringers understand the new, tilted playing field they are on, plaintiffs will frequently file motions to dismiss defendants' bare counterclaims and motions to strike bare affirmative defenses. Such motions to dismiss are fairly rare in patent cases now. The additional drain on judicial resources and the parties' resources as a result of this increased motion practice will be substantial and unnecessary.

Given the uncertainty of the post-*Twombl*y landscape, litigants and their counsel should review the pleadings in current cases to make sure they have sufficiently detailed affirmative defenses and counterclaims on file. For cases that have already progressed beyond discovery, this may not be an issue. Courts generally will not dismiss counterclaims or affirmative defenses that have been factually supported through typical discovery vehicles such as responses to contention interrogatories. So, it is advisable for those practitioners to double-check the pleadings to ensure that their noninfringement and invalidity contention interrogatories responses are sufficiently detailed and thorough, with ample factual support.

Changing the standards for defendants alone will not significantly reduce litigation size or cost, because the scope of the plaintiff's case is the chief driver of the size of litigation. And increasing pleading standards for one side of a litigation while maintaining it for the other side is neither equitable nor sensible. Patent pleadings should be held to the heightened *Twombl*y standards, as some courts began doing even before *Twombl*y, but the standards must be consistent for both claims and defenses. That is the only way to meet the *Twombl*y court's goal of controlling the ballooning size and costs of complex civil litigation within the patent field.
