BIBLIOGRAPHY

*by Linda A. Schulte**

Introduction

References contained in this Bibliography are to articles and other materials which discuss the legal issues of computer crimes, either exclusively or at least as the main topic of interest. This Bibliography does not contain articles that discuss:

- the use of computers in law enforcement
- the technical aspects of computer security
- the economic or social implications of computer crime, except to the extent the material also addresses legal issues

Organization

The entries in the Bibliography are subdivided into four sections. This was done to enable the user who is looking for a specific *type* of material, *e.g.*, law review article, newspaper article, to more quickly locate those references.

The first grouping contains references to all articles printed in legal publications. The second contains all "Notes" and "Comments" written by law students. The third collects all legal materials which do not fall within the first two categories. The last section contains references to non-legal publications, *i.e.*, articles contained in security, electronics, computer or business journals, and in newspapers and magazines of general circulation.
